

# HEDDLES

Leclerc always believes that light wood frame, heddle supports and metal heddles make the best combination for the shaft frame:

- convenient to put heddles on shaft
- very easy to move heddles on heddle support
- easy threading
- easy to install repair heddles

Standard wire heddles: supplied as standard equipment for each loom

Inserted eye heddles: wire heddles with special oval shaped eye. Heddles do not catch on each other. They slide easily on heddle support. Warp threads ride through eye smoothly.

Repair heddles: ends of heddles are not soldered and can be added anywhere in harness frame

LARGE INSERTED EYE HEDDLES: the inside dimension of the eye is 1/4" x 3/8" (10 mm x 7 mm)

LONG EYE HEDDLES: the inside dimension of the eye is 2" x 3/32" (50 mm x 3 mm)

FLAT METAL REPAIR HEDDLE: the ends are made in such a way that they can be added anywhere, anytime.

Texsolv System heddles are made in joined 100-heddle bundles. The strong, durable polyester is crocheted without knots. Heddles do not stretch. On all Leclerc Looms, heddles slide easily on heddle supports. Eye Lengths: 1/2"

Overall:	WIRE HEDDLES	INSERT EYE	WIRE REPAIR	LARGE EYE	LONG EYE	FLAT REPAIR	TEXSOLV
